

PALUTLA SAI VAMSHI

CSE (Data Science) Undergraduate

+91-9381554805 | sai8929gh@gmail.com | [LinkedIn Profile](#) | [GitHub Profile](#)

PROFESSIONAL SUMMARY

Final-year B.Tech student in Computer Science (Data Science) with hands-on experience building machine learning models and working with real-world datasets. Comfortable across the stack — cleaning and analyzing data in Python and SQL with Pandas and NumPy, building APIs with FastAPI, managing code with Git, and visualizing results in Power BI. Have fine-tuned a speech recognition model, built and deployed ML applications, and contributed to an open-source project alongside other developers.

EDUCATION

Rajeev Gandhi Memorial College of Engineering & Technology, Nandyala	2024 – 2027
<i>B.Tech in CSE (Data Science)</i>	CGPA: 7.05
Dr. K.V. Subba Reddy Institute of Technology	2021 – 2024
<i>Diploma, Andhra Pradesh</i>	Percentage: 75.3%

TECHNICAL SKILLS

Languages: Python, SQL, Java, HTML, CSS, DBMS
AI / Machine Learning: Machine Learning, Deep Learning, Hyperparameter Tuning
Frameworks & Tools: FastAPI, NumPy, Pandas, Matplotlib, Git & GitHub, VS Code, Jupyter, Google Colab
Databases: MySQL, MongoDB (Basic)
Productivity: Excel, Power BI

EXPERIENCE

AI Engineer Intern — Swecha & Viswam AI, IIIT Hyderabad

- Collected real Telugu voice recordings and fine-tuned an Automatic Speech Recognition (ASR) model, improving transcription accuracy on native speech patterns.
- Fixed bugs and resolved open issues in the organization's open-source codebase, working alongside other contributors on a shared project.
- Built and maintained the team's community website using Strapi (headless CMS) and Astro, making content easier to manage and pages faster to load.

PROJECTS

Multi-Modal Smart Fake News Detection System

- Built a multi-modal fake news detection system analyzing article text, images, and social media patterns.
- Applied NLP techniques to classify news articles as fake or real based on textual content.
- Developed a misinformation visualization dashboard to analyze and display fake news spread patterns.

Telugu Automatic Speech Recognition — Fine-Tuned ASR Model

- Fine-tuned a pretrained Wav2Vec2-based ASR model (swecha-gonthuka-asr) on 1,200+ Telugu audio-transcript pairs using a custom CTC data pipeline built with Hugging Face Transformers and PyTorch.
- Cleaned and validated the audio dataset — resolving missing and mismatched file references and merging multiple recording batches — then resampled audio to 16kHz for model compatibility.
- Trained the model for 20 epochs on a Tesla T4 GPU via Hugging Face Trainer, achieving 84.68% character-level accuracy (15.32% CER) on held-out test data.

CERTIFICATIONS

- AWS Cloud Practitioner Certification — Amazon
- Introduction to IoT and Digital Transformation — Cisco
- UiPath Certified Professional Automation Developer Associate Certification — UiPath
- Soft Skills — NPTEL
- Internet of Things — NPTEL
